OBJECTIVE

Experienced *Senior Data Engineer* with 5+ years of expertise in *cloud solutions, big data, scalable architectures, and automation*. Specialized in designing and optimizing *end-to-end data pipelines, cloud-native architectures, and CI/CD automation*. Passionate about building *high-performance, cost-efficient, and maintainable data platforms* to drive business impact. Looking to contribute as a *Data Engineer, Solution Architect, or DevOps-focused specialist* in a cutting-edge, cloud-first environment.

PROFESSIONAL EXPERIENCE

Capgemini – Senior Data Engineer – Poland

Aug 2023 – Present

Data Processing

- Designed and optimized data processing architecture using Databricks, improving efficiency and maintainability.
- Developed a robust testing framework, reducing release risks and enhancing deployment stability.
- Led the adoption of code generation for Azure Databricks and Spark, streamlining development workflows.
- Architected Azure Pipelines for end-to-end data processing orchestration.
- Integrated Azure Data Factory pipelines, ensuring scalable and automated data workflows.
- Conducted internal technical mentorship and knowledge-sharing sessions, fostering team growth.

Mimesis Inc – Senior Data Engineer & Co-Founder – Armenia

Jan 2021 – May 2023

AI-Driven Data Processing and Infrastructure (Jan 2021 – May 2023)

- Designed and implemented scalable data ingestion pipelines using AWS S3, AWS RDS, and Spark (PySpark).
- Built automated data processing workflows leveraging NumPy, OpenCV, and Jinja templating.
- Developed containerized ML and ETL solutions using Docker for production deployment.
- Led backend API development using Python and FastAPI, integrating data pipelines into the product architecture.
- Established efficient CI/CD workflows (Jenkins) to streamline deployments and reduce operational overhead.
- Designed a scalable cloud infrastructure for ML and data processing workflows, improving system resilience and flexibility.

EPAM Systems – Data Engineer – Belarus

Jul 2019 – Sep 2021

ML-Driven eCommerce Optimization (Sep 2020 – Sep 2021)

- Designed and implemented scalable Airflow-based data pipelines, ensuring efficient data flow and transformation.
- Optimized real-time data processing using Apache Spark and Kafka, reducing data latency and increasing performance.
- Automated artifact management via Azure Jenkins CI/CD, accelerating deployments.

Enterprise BI and Analytics (Jan 2020 – Jul 2020)

- Developed ETL pipelines in Azure Data Factory, enabling real-time data ingestion and transformation.
- Architected a STAR database model, optimizing Power BI analytics performance.
- Implemented CI/CD workflows for analytics solutions, reducing manual intervention.

Marketing Data Platform (Oct 2019 – Jan 2020)

- Designed platform-agnostic Azure Databricks pipelines, enhancing system flexibility.
- Implemented automated CI/CD processes from GitHub to Azure Databricks, increasing development efficiency.
- Developed a structured, multi-zone Azure Blob Storage model, optimizing data organization and retrieval.

EDUCATION/CERTIFICATIONS

Azure Data Fundamentals – Microsoft

Feb – 2024

- Certificate link: [microsoft website](#)

Azure Fundamentals – Microsoft

Dec – 2023

- Certificate link: [microsoft website](#)

English B2 Language School – Streamline Language School

Sep – 2020

- Successfully passed exam with writing and speaking parts
- Certificate link: [streamline website](#)

M.S. in Physics & Programming – BSU

Sep 2016 — Jun 2021

- Done 3 coursework and 1 diploma related to Computer Science

KEY COMPETENCES

Languages: Python, NodeJS, SQL. **Clouds:** AWS, Azure, Terraform, Kubernetes. **Databases:** PostgreSQL, Microsoft SQL, MongoDB. **DevOps:** Jenkins, Airflow, Azure DevOps, Azure Pipelines. **Other:** Apache Hadoop, Apache Spark, Linux, Databricks, Lambdas.
